

WHO IS JS SERVICES?

JS Services is an independent, privately held technical research company. Founded in 1984 by John Slazas, who has been a CME member since 1989. JS Services began as a resource to local floor traders and has expanded, primarily by word of mouth into a global research group, with individual professional, institutional and Hedge Fund clientele worldwide.

JS Services is a daily resource for some of the most profitable traders in the world. JS Services is not only an advisory service but also an integral partner in its clients profit objectives.

JS Services is your technical research group. Your unbiased resource for technical research.

WHY IS JS SERVICES CREDIBLE?

JS Services began its career surrounded by the founding fathers of financial futures and learned the technical fundamentals from the early masters of short-term trading strategies.

John Slazas, founder of JS Services, began his career in the late 1970's and witnessed first hand the creation of the Eurodollar, SP500 Index and the e-mini contracts. In 1988, John Slazas was appointed to the GLOBEX screen design committee as a non-member for his insight into the technical trading aspects of what, at the time, was expected to be the future of trading- screen based order execution. In 1995, John Slazas was recognized as a technical trading system expert in Abell/Koppell's INNER GAME OF TRADING.

JS Services clients are real professionals who consistently take money out of the market and include some of the most respected names in the business. (Goldman Sachs, ABN AMRO, Caxton Corporation, Oracle Partners, Stafford Trading, Geneva Trading and many more.)

PHILOSOPHY

JS Services is a technical student of the market and believes that the current price is the best account of all market information, representing the current balance of supply and demand, reflecting both psychological and fundamental data. Further, technical trading strategies are the best way to capture profitable opportunities in the 1 to 55-day time frame.

Over its 20+-year study, certain technical conditions have become apparent, which are true for all markets.

1. ALL MARKETS TRADE IN LEVELS AND PRICE BANDS. Prices trend from one level to the next and consolidate within price bands. By isolating these price levels or inflection points, traders are able to better manage risk and construct higher probability trade opportunities.
2. DEFINING A MARKET'S TECHNICAL POSITION IS IMPERATIVE TO THE SUCCESSFUL IMPLEMENTATION AND SELECTION OF A TRADING STRATEGY. A market is either moving from one level to the next (TRENDING) or is oscillating in a NEUTRAL sideways consolidation within a PRICE BAND.
 - a. Trending markets are further defined as at the beginning, middle or end stages. Each trend has different strengths, gradual or accelerating and will go through different corrective and extreme or exhaustive stages.
 - b. Neutral sideways markets will range from stagnant to volatile oscillation.

By properly identifying a market's technical position a trader is better able to apply a strategy with the highest probability of success.

WHERE IS THE COMPANY GOING?

JS Services has spent its career working together with successful professional Traders, as an integral component to their decision making process.

We are your partner to trading success.

To further this aim JS Services created the TRADING FOUNDATION in 2002, a teaching and training center designed to be a career resource.

Traders learn the basics or a new strategy or style under "live" market conditions and are able to draw on the center's resources at any time.

Real research and real trading tools for real results, now and throughout your trading career.

Too many false profits preaching immediate results and quick fixes to the complexities of successful trading.

Invest in yourself and build a relationship with a professional research group that is designed to aid you in making money!
